No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (Operations Staff, P.O. Box 765, Schenectady, New York 12301), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1978 articles are the same as those shown for current articles.

CONTENTS OF VOLUME 34

NUMBER 1, APRIL 1978

THEODORE D. FAY, JR., AND WIESLAW WISNIEWSKI. The Light Curve of the Nucleus of Comet d'Arrest 1

SAMUEL GULKIS, MICHAEL A. JANSSEN, AND EDWARD T. OLSEN. Evidence for the Depletion of Ammonia in the Uranus Atmosphere 10

W. MACY, JR., JACK GELFAND, AND WM. HAYDEN SMITH. Interpretation of the 6818.9 Å Methane Line in Terms of Inhomogeneous Scattering Models for Uranus and Neptune 20

JAMES B. POLLACK, DONALD W. STRECKER, FRED C. WITTEBORN, EDWIN F. ERICKSON, AND BETTY J. BALDWIN. Properties of the Clouds of Venus, as Inferred from Airborne Observations of Its Near-Infrared Reflectivity Spectrum 28

A. T. YOUNG, L. D. G. YOUNG, AND R. A. J. SCHORN. High-Dispersion Spectroscopic Observations of Venus near Superior Conjunction. II. The Carbon Dioxide Band at 7883 Å 46

J. P. LESTRADE AND J. W. CHAMBERLAIN. The Clouds of Venus: An Anisotropic Scattering Model 52

J. VEVERKA, J. GOGUEN, S. YANG, AND J. L. ELLIOT. How to Compare the Surface of Io to Laboratory Samples 63

PHILIPPE L. LAMY. Optical Properties of Silicates in the Far Ultraviolet 68

A. WORONOW. A General Cratering-History Model and Its Implications for the Lunar Highlands 76

GORDON E. TAYLOR AND DAVID W. DUNHAM. The Size of Minor Planet 6 Hebe .. 89

FRANCO SCALTRITI, VINCENZO ZAPPALÀ, AND REINHARD STANZEL. Lightcurves, Phase Function and Pole of the Asteroid 22 Kalliope 93

W. WIESEL. Fragmentation of Asteroids and Artificial Satellites in Orbit 99

W.-H. IP. Model Consideration of the Bombardment Event of the Asteroidal Belt by the Planetesimals Scattered from the Jupiter Zone 117

A. W. HARRIS. Satellite Formation, II 128

TAKAFUMI MATSUI AND HITOSHI MIZUTANI. Gravitational N-Body Problem on the Accretion Process of Terrestrial Planets 146

JULIO A. FERNÁNDEZ. Mass Removed by the Outer Planets in the Early Solar System 173

R. G. FRENCH, J. D. GOGUEN, AND J. G. DUTHIE. Martian Occulation of ϵ Gem as Observed from the C. E. Kenneth Mees Observatory 182

K. AKSNES AND F. A. FRANKLIN. Mutual Phenomena of Jupiter's Five Inner Satellites in 1979 188

K. AKSNES AND F. A. FRANKLIN. Mutual Phenomena of Saturn's Satellites in 1979–1980 194

NOTES

ANDREW T. YOUNG. Mercury's Craters from Earth 208

A. DOLLFUS, C. R. CHAPMAN, M. E. DAVIES, O. GINGERICH, R. GOLDSTEIN, J. GUEST, D. MORRISON, AND B. A. SMITH. IAU Nomenclature for Albedo Features on the Planet Mercury 210

LAWRENCE E. KRUMENAKER. Remarks on the Nomenclature of Mercury 215

ICARUS Meeting Report

Barry L. Lutz. Symposium on Planetary Atmospheres 220

Book Reviews

INFORMATION FOR AUTHORS

ICARUS is devoted to the publication of original contributions in the field of solar system studies. Manuscripts reporting the results of new research—observational, experimental, or theoretical—concerning the astronomy, geology, meteorology, physics, chemistry, biology, and other scientific aspects of the solar or extrasolar systems are welcome. The journal generally does not publish papers devoted *exclusively* to the Sun, the Earth, celestial mechanics, or astrophysics. The preferred language of publication is English, but in special cases manuscripts are considered in French, German, or Russian. All papers are reviewed, generally by two independent referees. Authors may be asked to respond to criticisms and suggestions by the referees prior to publication.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Icarus* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

There are no page charges.

Manuscripts. Authors should submit **four copies** of the manuscript, including figures, tables, etc., to the Editor, and should retain the original typescript. One of the four sets of figures should be suitable for camera-ready reproduction. All manuscripts must be typewritten with wide margins and **double-spaced throughout,** including references and footnotes. Number each page of the manuscript. Include on the first page the title, name(s) and affiliation(s) of author(s) including mailing address(es). At the bottom of this page note the number of manuscript pages, figures, and tables. On the second page indicate a proposed running head of not more than 35 characters, and the name and address to which editorial correspondence and proofs should be directed. The third page should contain a brief abstract, and the text should begin on the following page. Following the main text, give Appendices, Acknowledgments, References, Tables, Figure Captions, and Figures, in that order. Places where Figures and Tables are to appear in the published paper should be marked in the margins of the manuscript.

Tables are to be numbered consecutively with Roman numerals in order of their citation in the text. Each table should be typed, **double-spaced,** on a separate sheet with due regard to the proportions of the printed page. All tables should bear appropriate headings.

Figures. At the time of submission of the manuscript, one original of each figure is to be submitted in such form as to permit photographic reproduction without redrawing: Line drawings should be carefully drafted, no larger than 22 × 30 cm. Both original drawings or standard glossy photographic reproductions are acceptable. The lettering should be large enough to allow a reduction to $\frac{1}{3}$ the original size. **Each figure should be identified with the author's name and figure number.** All figures, whether line drawings or half-tones, should be numbered consecutively in Arabic numerals, in order of their citation in the text. Figure captions should be typewritten on a separate sheet, following the text. Color plates and foldouts are published at the author's expense.

Literature citations in the text should be in one of the following forms: Leighton and Murray, 1966 (for two authors); Marov *et al.*, 1973 (for three or more authors); Robertson, 1937, p. 436 (for reference to a specific page). To distinguish two or more works by the same author(s) in the same year, use suffixes a, b, etc., following the year (e.g., Öpik, 1966a, 1966b).

Literature citations in the bibliography should be **listed alphabetically** according to the surname of the (first) author. Journal references should contain the **names and initials of all authors, the year, the title of the article, the standard abbreviation of the journal, the volume number, and the first and last page numbers.** Titles of journals and books should be in italics, volume numbers in bold face. (In a typed manuscript, indicate italics by single underlining and bold face by sawtooth or double underlining.) Below are shown examples of the proper reference forms for a journal article, a book chapter, and a book, respectively.

Goldreich, P., and Peale, S. J. (1968). The dynamics of planetary rotations. *Ann. Rev. Astron. Astrophys.* **6**, 287–320.

Harris, D. L. (1961). Photometry and colorimetry of planets and satellites. In *Planets and Satellites* (G. P. Kuiper and B. M. Middlehurst, Eds.), pp. 272–342. University of Chicago Press, Chicago.

Krinov, E. L. (1960). *Principles of Meteoritics.* Pergamon Press, New York.

Careful compliance with these instructions for the preparation of the list of references is required; manuscripts with incomplete references (or missing abstracts) may be returned to the author for correction before being considered for publication.

Please write with attention to organization, style, and especially brevity. Present results logically, with order dictated by the needs of the reader. Take special care in composing the title and abstract, since these will be the most frequently read sections of the paper. In the title, specific words are preferable to general ones. The abstract should summarize the conclusions of the research, including quantitative results where appropriate, rather than merely stating the problem.

Whenever possible, quotients in mathematical expressions should employ the solidus (/) rather than be displayed in built-up form. However, for units, exponential notation is preferred (e.g., erg cm^{-2} s^{-1}, not erg/cm^2s). Most authors will recall the difference between "i.e.," and "e.g.", will note that such nouns as "data" are plural and "mare" singular, and will take care to insert a zero before decimal fractions lying between +1 and −1.

Galley proofs will be furnished to authors. When submitting a manuscript, the author should include a list of the symbols employed, identified typographically, not mathematically. This list will not be printed, but will help to avoid costly author's corrections in proof. Fifty *reprints* of each paper will be furnished gratis to the author and additional reprints may be purchased.
